Welcome! We will begin shortly.

This is a Zoom webinar. All participant videos are off and lines are muted.
TNRC Virtual Panel

The impacts of infrastructure sector corruption on conservation: Implications for programming

Don Nelson
Professor of Anthropology, Institute of Resilient infrastructure Systems, University of Georgia, and Humans and Environmental Change Consulting

Adriana Ramos
Coordinator, Policy and Law Program, Instituto Socioambiental

Bernadine Fernz
Global Head of Infrastructure and Regional Head of Asia Pacific, Open Contracting Partnership

Roberto de Michele
Principal Specialist, Innovation in Citizen Services Division, Inter-American Development Bank

Evan Freund
Senior Director, Sustainable Infrastructure and Finance, Freshwater, WWF-US

Kate Newman
Vice President, Sustainable Infrastructure and Public Sector Initiatives, WWF-US (Moderator)

J. Scott Pippin
Carl Vinson Institute of Government, Institute of Resilient infrastructure Systems, University of Georgia
Get Engaged

Please introduce yourself and pose questions in the chat

*The chat box is visible to all audience members and panelists. Audience questions will be raised in moderated discussion as time allows.*

All audience lines are muted

*Given high attendance in this virtual panel, all audience videos are off and lines have been muted.*
The impacts of infrastructure sector corruption on conservation: Implications for programming

J. Scott Pippin
Carl Vinson Institute of Government, Institute of Resilient infrastructure Systems, University of Georgia
The Impacts of Infrastructure Sector Corruption on Conservation

Donald R. Nelson, J. Scott Pippin, Andressa V. Mansur, and Cydney K. Seigerman
What is infrastructure?

The integrated set of social, physical, and ecological components that provide services to meet human needs.

Examples include:
- Transportation networks,
- Dams,
- Energy networks,
- Communication and data systems, and
- Ports.
## Infrastructure Impacts on Conservation

Infrastructure development has direct and indirect impacts on conservation efforts.

<table>
<thead>
<tr>
<th>Direct Impact Examples</th>
<th>Indirect Impacts Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>Land clearing</td>
<td>Increase human settlement</td>
</tr>
<tr>
<td>Habitat fragmentation</td>
<td>Increase legal and illegal extractions</td>
</tr>
</tbody>
</table>

What is corruption?

The abuse of entrusted power for private gain.

**Grand corruption** is the abuse of high-level power that benefits the few at the expense of the many (Transparency International).

**Petty corruption** involves lesser economic value and usually relates more to public services and administrative processes that may be encountered in daily life.

## Infrastructure, Corruption, and Conservation

<table>
<thead>
<tr>
<th>Examples of infrastructure corruption</th>
<th>Potential conservation consequences</th>
</tr>
</thead>
<tbody>
<tr>
<td>Political influence promoting an airport with low traffic demand in a high biodiversity region for the</td>
<td>Direct consequences include the unnecessary loss of natural habitat and disturbance to wildlife through increased noise and air pollution. Indirect consequences include deforestation to expand the agricultural frontier and the cutting of new roads for airport access.</td>
</tr>
<tr>
<td>political gain of decision-makers and their agricultural industry supporters.</td>
<td></td>
</tr>
<tr>
<td>Bribing consultants for a favorable environmental impact assessment (EIA) of road feasibility in a</td>
<td>Immediate impacts include deforestation, ecosystem fragmentation, and disturbance of animal migration. Long-term consequences include the loss of connectivity of natural ecosystems, mortality from road collision, and increase of land clearing.</td>
</tr>
<tr>
<td>biodiversity conservation priority area.</td>
<td></td>
</tr>
<tr>
<td>Collusion between officials and project implementers to circumvent environmental protections during dam</td>
<td>Irreversible consequences may include the loss of fish and other aquatic species, and further impacts on the trophic chain.</td>
</tr>
<tr>
<td>construction and failing to construct a needed fish passage.</td>
<td></td>
</tr>
<tr>
<td>Contracting a relative to supply needed construction materials, resulting in illegally sourcing sand from</td>
<td>Immediate and long-term impacts include the destruction of ecosystem integrity of remote natural habitats (e.g., corals, seaweeds, and seagrass meadows) through erosion and the physical disturbance of benthic habitats, ecological communities, and food webs.</td>
</tr>
<tr>
<td>protected areas.</td>
<td></td>
</tr>
<tr>
<td>Collusion between a port company and consultants to misrepresent a management plan for bilge water and</td>
<td>A direct impact is pollution of the water body in the form of increased sedimentation and toxic materials released from bilge discharge. There is also the possibility of the increased spread of invasive exotic species, threatening marine organisms, food webs, and fish stocks.</td>
</tr>
<tr>
<td>other hazardous materials from the operation and washing of vessels at dock.</td>
<td></td>
</tr>
</tbody>
</table>
Connection to Corruption

**Corrupt practices undermine conservation objectives by:**

- Producing projects that are neither needed or desired.
- Avoiding regulations and processes intended to limit environmental impacts of projects.
- Decreasing the efficacy of projects, thus requiring addition development to meet human needs.
Infrastructure Lifecycle

• **Project Origination** – formal and informal methods by which an infrastructure idea moves into a formal review procedure.

• **Feasibility & Design** – activities related to project assessment, design, and budgeting.

• **Contracting & Implementation** – permitting, bidding, and other bureaucratic processes that move a project from design through construction.

• **Operations & Maintenance** – project use, management and preservation.

• **Project Origination** – formal and informal methods by which an infrastructure idea moves into a formal review procedure.

• **Evaluation & Audit** - systematic review of the project development process from origination through operation.

The impacts of infrastructure sector corruption on conservation: Implications for programming

Donald R. Nelson
Professor of Anthropology, Institute of Resilient infrastructure Systems, University of Georgia, and Humans and Environmental Change Consulting
Goals of anti-corruption measures

The right project is selected

Transparency and fairness in selection and execution

Project is done as approved and contracted

Desired services are provided
Anti-corruption measures will build

- Integrity
  - Transparency International Integrity Pact

- Accountability
  - CoST Assurance Approach

- Transparency
  - CoST Accountability Guidance

Image credit: D. Nelson, use of substandard materials - Mozambique
How to respond?

- Risk assessment
  - Identify priorities
  - Align with capacities
Advocacy

- Structural and institutional levels
  - Questions to demand transparency
    - How does the project align with national or government strategic goals and conservation objectives?
      - Push for legal and regulatory change
  - Formal justifications for project development
  - Maintain an official lobby registry
  - Implement whistleblower mechanisms

*Image credit: Vinicius Mendonça/Ibama, Brumadinho dam break*
Direct action

- Implementing anti-corruption measures
- Open data standards
  - Availability and accessibility
  - Authority over data interpretation
  - Inclusive metrics – work with stakeholders
- Whistleblower mechanisms
- Working with investigative reporters
Infrastructure corruption and conservation

Risks exist throughout the lifecycle
Understanding risks and local capacities provides space for:
Advocacy and direct action
