Each year, up to 40% of all food produced for people globally is lost or wasted. A significant contributor to this statistic is food waste from school cafeterias. Start your students on the right foot this school year by introducing responsible food habits for them to put into practice every day. Kids will learn the connection between how they treat food and the health of our planet, in hopes that they will think twice before sending their leftover lunch to the garbage.

The presenters

<<< Alex Nichols-Vinueza
Program Manager, Food Loss and Waste
WWF-US

Julia Borland >>>
Program Intern, Food
WWF-US
**BELL-RINGERS**

Help prepare your learners by introducing the topic with these warm-up questions.

*Predict*
What do you think is the number one food item that gets thrown away?

________________________________________________________________________

*Brainstorm*
Name three places that might produce a lot of food waste:

- ______________________________________________________
- ______________________________________________________
- ______________________________________________________

*Define*
What is a landfill?

________________________________________________________________________

________________________________________________________________________

*Classify*
**Composting** is when you collect organic material like food scraps that break down and can be used as fertilizer. Circle the items you think could go in a compost pile:

- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
- [ ]

ACTIVITIES

Check out these lesson plans to supplement the content from the event.

Be a Food Waste Warrior toolkit

Perform a food waste audit at your school! This toolkit provides resources, information, and step-by-step guidance on how to teach the planetary impact of what we eat and what we throw away. Teach the unit in full, or pick and choose individual activities.

Available for grades K-12

What is in each grade band’s toolkit:

- Teaching Guide: How to Get Started
- Slideshow: “What Is Food Waste?”
- Food Audit Instructions
- Discussion Questions
- Student Activities
- Downloadable Food Waste Posters

Monarch Butterfly toolkit

Our treatment of food also impacts wildlife species. Check out the language arts activity, *Eating Our Planet*, from the monarch butterfly toolkit.

ASSESSMENTS

Conclude your teaching of food waste with these resources and fun assessment tools.

Wild Classroom “Food & Our Planet” collection on Kahoot!

- What we waste when we waste food
- How food waste affects the environment
- Eat smarter and protect nature

Leftover Lunch worksheet (next page)

Use the worksheet on the following page as an assignment or quiz following the viewing of the Conservation in the Classroom event. Answer key:

1) water, air, soil, fertilizer, people
2) D
3) Beef
4) C
5) B
6) Food in landfills doesn’t break down properly and emits greenhouse gases, contributing to climate change.
7) Habitats are being converted for agriculture, decreasing biodiversity and endangering species.
8) B
9) Save it, share it, freeze it, donate it, compost it, repurpose it

Ways to help

- Small steps to reduce food waste
- Eating a variety of foods is good for you—and the planet
- Fight climate change by preventing food waste
- Reimagine your refrigerator to help freeze the footprint of your food
- Supercharge your soil with kitchen food scraps
- Support the Zero Food Waste Act
Leftover Lunch: How Saving Food Saves the Planet

Answer the following questions after learning about the impact of food waste on the environment. Some questions require you to circle the correct answer, while others will ask you to write your answer(s).

1. Name some resources that are needed to grow our food.
   - 
   - 
   - 
   - 

2. How much of our livable land do we use for farming here in the United States?
   a. 20%
   b. 30%
   c. 40%
   d. 50%

3. What food uses the most resources (food, water, energy) to be produced: beef, chicken, or vegetables? ________________

4. How much of the food that people buy in the US is wasted?
   a. 10%—20%
   b. 20%—30%
   c. 30%—40%
   d. 40%—50%

5. What’s the number one food people throw out?
   a. Bread
   b. Fruits and vegetables
   c. Desserts
   d. Meats

6. Explain why it is a bad thing when food ends up in a landfill.

_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________
7. What is the connection between food waste and wildlife?

_________________________________________________________________________

_________________________________________________________________________

_________________________________________________________________________

8. What does it mean to compost?
   a. Throw food in the trash
   b. Collect food scraps that break down and can be used as fertilizer
   c. Burn leftover food
   d. Share food with others

9. Name responsible options for leftover food to avoid throwing it in the garbage:
   •
   •
   •

10. Write a few sentences that describe the smart choices you plan to make in your everyday life that will help reduce the impact of food waste on our planet:
    ________________________________________________________________________
    ________________________________________________________________________
    ________________________________________________________________________
    ________________________________________________________________________
    ________________________________________________________________________
