

Dear colleagues,

On this year's [International Anti-Corruption Day](#), all focus (as with most of the world) is on the impact of the COVID-19 pandemic. Their theme for 2020, "Recover with integrity," recognizes the increased risks for corruption that this pandemic has inevitably caused, from emergency measures to relaxed safeguards and reduced oversight. As we recover from this devastating public health crisis, it is critical that we do so with integrity and with anti-corruption approaches in mind.

In conservation and natural resource management, there are unique challenges. The illegal wildlife trade, the [spread of zoonotic diseases](#), and increased risks for future pandemics in a rapidly changing climate are at the forefront of many conservationists' minds. The impact of COVID-19 has affected natural resource supply chains, [increasing illicit activity](#), and it has crippled communities that rely on environmental tourism. Addressing corruption in conservation and natural resource management is more crucial than ever – and there are [many ways of thinking about how to address this complex issue](#).

In our latest blog post, [Five ways of thinking about how to address corruption in conservation and natural resource management](#), we explore **five themes** that have emerged in the first two years of the Targeting Natural Resource Corruption (TNRC) project, along with resources to help you learn more.
