

Targeting Natural Resource Corruption

Welcome! We will begin shortly.

This is a Zoom webinar. All participant videos are off and lines are muted, but please feel free to introduce yourself in the chat.

Q&A

Leave Meeting

1. Pose questions at any time by clicking on the “Q&A” icon

“Like” questions to “upvote” them for the moderator and/or answer from your experience

2. Exchange thoughts with other participants via chat

Introduce yourself and share your own insights and ideas in the chat window

The image shows two side-by-side screenshots of a 'Polls' interface. The left screenshot, titled 'Connection', shows a poll question: '1. How are you attached to the meeting?' with options: Windows PC, Mac PC, Android phone/tablet (selected), iOS phone/tablet, and Other. Below this is another question: '2. How are you attached to the audio?' with options: Phone (selected) and VOIP/computer speakers. A 'Submit' button is at the bottom. The right screenshot, titled 'Host is sharing poll results', shows the same poll results. For the first question, the results are: Windows PC (67%), Mac PC (33%), Android phone/tablet (0%), iOS phone/tablet (0%), and Other (0%). For the second question, the results are: Phone (0%) and VOIP/computer speakers (100%). A 'Close' button is at the bottom.

3. Respond to polls as they are launched

Make your selections and remember to click “submit”!

POLL

Where are you based?

- a. Africa
- b. Asia
- c. Latin America and the Caribbean
- d. North America
- e. Europe
- f. Other

What we'll cover

- How has corruption been defined in relation to renewable natural resources?
- How have understandings, definitions and indicators of corruption relevant to natural resources changed or evolved over time and space?
- What are the main implications of the various definitions of corruption in terms of prioritization of policies and approaches for tackling natural resource corruption?
- What lessons should natural resource management practitioners take away from discussions on corruption definitions and how might they apply these in their work?
- Insights from natural resource sector cases (Ghana & Peru)

What are we talking about when we talk about corruption?

Practitioner Definitions

TI and WB definitions similar, focus on agency of individuals

TI: Abuse of entrusted power for private gain (Note: focus on both public and private power)

WB: Abuse of public office for private gain (Note: focus on public office)

Academic Definitions

Academic definitions more diverse, greater focus on systemic factors

Robbins: A system of normalized rules, transformed from legal authority, patterned around existing inequalities, and cemented through cooperation and trust (Context: Forestry)

Al-Kasim, Søreide and Williams: Manipulation of framework conditions to benefit narrow interests over broad societal interests (Context: Extractive Industries)

POLL

From your perspective, which definition is most helpful for understanding and responding to the impact of corruption in your work?

- a. Transparency International: “Abuse of entrusted power for private gain”
- b. World Bank: “Abuse of public office for private gain”
- c. Robbins: "A system of normalized rules, transformed from legal authority, patterned around existing inequalities, and cemented through cooperation and trust"
- d. Al-Kasim et al: “Manipulation of framework conditions to benefit narrow interests over broad societal interests”

Other dimensions:

- Informal/formal institutions
- Social norms and customs
- Is power entrusted or taken?

Three main theoretical perspectives in recent corruption research

Implications #1

Corruption=individual deviance=principal-agent responses work (i.e. law enforcement, bureaucratic sanctions etc.)

Corruption=system failure=collective action responses needed (i.e. negotiate new political settlement etc.)

Implications #2

**Quality of analysis matters for
developing appropriate responses**

**Our assumptions about corruption, a context, a
problem, our own position, can skew understanding
and make the road to good responses longer**

A green John Deere 1188S II Hydro 4 combine harvester is shown in a cornfield, harvesting corn. The harvester is green with yellow accents and has the model number '1188S II Hydro 4' and a '20' badge visible. It is moving through rows of corn, leaving a trail of harvested grain and chaff behind it. The sky is overcast.

Why corruption definitions matter: “land grabbers” in Ghana

- Biofuel land grabbing euphoria in mid-2000s
- Institutionalised corruption and institutional pluralism – outcome of colonial legacy
- Endless struggles for authority over land
- Re-invention of custom and manipulation of laws to legitimise land deals

“Mischaracterisation” of the corruption problem

Imageries of the contested concepts “land grabbing” and “land transactions”: Implications for biofuels investments in Ghana

Festus Boamah

Department of Geography, University of Bergen. Post Box 7802, N-5020 Bergen, Norway.

ARTICLE INFO

Article history:

ABSTRACT

In Ghana, the contested concepts of “land grabbing” and “land transaction” are strategically applied by

“Mischaracterisation” of the corruption problem cont’d

- Customary land tenure regime & ambivalence towards large-scale agricultural investments
- Land reform initiatives re-produce existing complexities
- Bureaucratic procedures in land registration reinforce the role of chiefs as ‘kingpins’ of large-scale land deals.
- Lack of clarity on the role of chiefs – Landowners or custodians of Land?
- Lack of clarity on which institution must decide – Chieftaincy institution or state institutions?
- Fluid land boundary demarcations – must decide per formal law or custom?

Which corruption perspective applies?

- Corruption as problem-solving? e.g. biofuel investors and labour migrants cut corners to circumvent constraints or maximise gains as the **most promising remediation** strategy?
- Corruption as Collective Action Problem? e.g. – clandestine manoeuvres as **norms** set and justified by **precedents**?
- Corruption as Principal-Agent Problem? e.g. – near invincible, rapacious chiefs, or “lame-duck” state elites, or selfish politicians pursuing personal gains against collective interests of unsuspecting or unprincipled population?

Outcomes of large-scale land deals

- “Legal” Land Deals but massive land dispossession – social justice problems!!!
- Legality or morality?

Identifying remedial responses

- Who are the real “land grabbers“?
 - **The state?**
 - **Chiefs?**
 - **Biofuel Investors?**
 - **Land users?**
- What are suitable remedial measures?
 - **Strong state regulations to curtail the powers of chiefs?**
 - **Collaboration between all actors?**

A map of South America with Peru highlighted in red. The rest of the continent is shown in light yellow, and the surrounding oceans are light blue. A large, semi-transparent white circle is overlaid on the left side of the map, containing the title and bullet points.

Shapes of corruption in Peru's forest sector

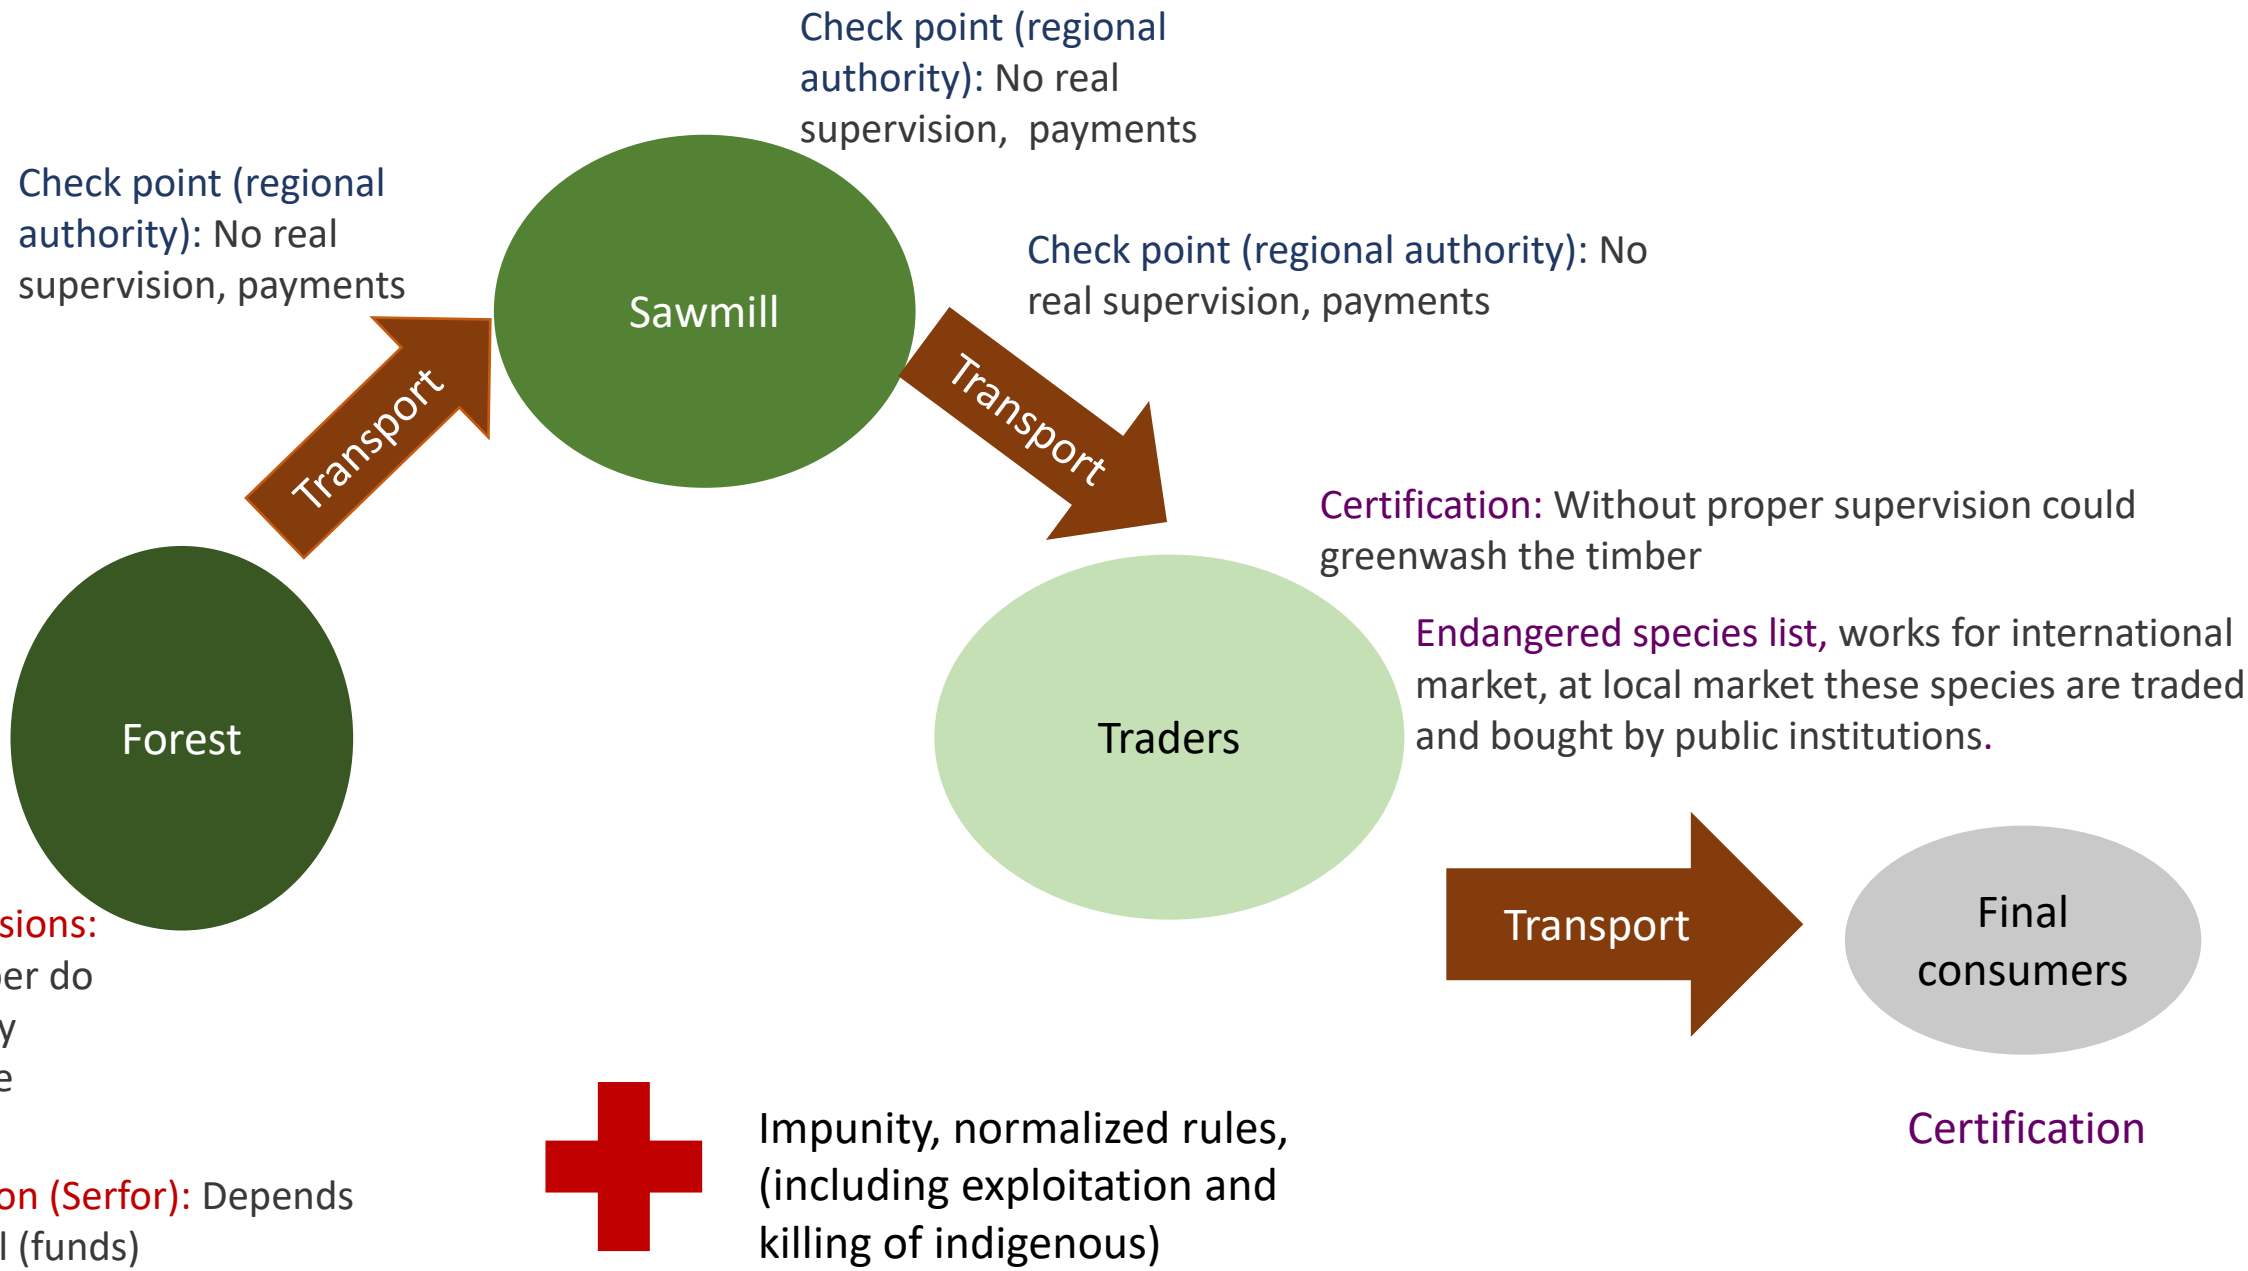

- Development of cross-sectoral approach aimed at ensuring the effective regulation and control of environmental and forest crimes
- Direct support to Regional Governments to strengthen their institutional capacity to address illegal logging
- Work at community level to implement responsible practices for forest management
- Formal recognition of indigenous people land rights, and approval of land titling programs
- **Yet, Peru ranks fifth in the world and third in the Americas in terms of suffering the most tropical primary rainforest loss**

Community management communities are engaged but when communities report illegal logging face impunity and death treats.

Forest Concessions: work but timber do not necessarily come from the concession

Field supervision (Serfor): Depends on political will (funds)

Identifying remedial responses

- Comprehensive approach: Amazon as a territory, with different actors in dispute
- Accountability beyond criminal liability as a way to challenge “normalized rules”: Each time illegal timber is detected, independent commission must investigate to discover what went wrong and implement measures
- Support indigenous groups reports on illegal logging. Introduce clauses in the contracts/agreements with national, regional and local authorities
- Consider the issue of land titling at the core

Some main takeaways

- Corruption can be defined differently;
- How it is defined, and who does the defining, matter for diagnosis and remedy;
- Definitions should be appropriate for sectoral and geographic contexts;
- Corruption analysis tends to be improved when positionalities are explicit, methods are appropriate to research questions, and peer review is double-blind;
- There are multiple opportunities in project cycles to integrate improved corruption analysis.
